FOREWORD

1. Purpose and Scope

The *Economic Intelligence Statistical Handbook*, 1971 provides statistics on the economies of the Communist countries and the countries of the North Atlantic Treaty Organization (NATO)—including France. New tables and graphics have been added to make possible more explicit comparisons.

In general, the data in the *Handbook* are for 1960 and 1965-70. A summary table is presented for European NATO, Eastern Europe, each of the Communist countries, selected NATO countries, India, and Japan. The data for Mongolia, because of their scarcity, are presented in a summary table but, in general, are not included in the individual commodity or aggregative tables. The graphics are designed for use as visual aids. Footnotes have been used liberally to give definitions, exceptions, and methodology. Footnotes to the commodity tables give more detailed definitions of the data than those appearing for the commodities on the summary table for each country. Therefore, the footnotes to the commodity tables should be referred to when a complete description of the data shown is required.

2. Rounding of the Totals

In each table the data for the individual countries have been rounded consistently. Because of the limitations in the cumulative data, the totals have been rounded, with some exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Totals are not presented if missing data are believed to represent a significant part of the total. In general, data are not given for countries for which a significant amount of data is not available. Because of rounding, components may not add to the totals shown.

3. Symbols

The abbreviation N.A. (*not available*) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation Negl. (*negligible*) is used when the magnitude of the data is less than half of the final unit employed for each table. The metric system is used throughout.

4. Classification of Data

The overall classification of the *Handbook* is SECRET/NO FOREIGN DISSEM. The unclassified data, indicated by an asterisk (*), may be official data of the country cited or may be unclassified estimates of this Office. Tables in which all of the data are unclassified have been identified accordingly. *Classified data, however, frequently occur on the reverse of the page, and, therefore, caution should be exercised if pages are removed from this publication.*

5. Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for the NATO and other Free World countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), are from unclassified publications of other international organizations or individual countries of the Free World, or are estimates of this Office.

6. Terms

Unless otherwise indicated, the term *Communist Countries* includes the USSR, the countries of Eastern Europe, Communist China, North Korea, North Vietnam, Albania, Cuba, and Yugoslavia; the

SECRET

SECRET

term *Eastern Europe* includes Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Romania. The term *NATO* includes the United States, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the United Kingdom, and West Germany. The term *developed countries* includes Austria, Belgium, Denmark, Finland, France, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Norway, the Netherlands, Sweden, Switzerland, the United Kingdom, West Germany, Australia, Canada, Japan, New Zealand, South Africa, and the United States. The term *less developed countries of the Free World* includes (1) all countries of Africa

except the Republic of South Africa, (2) all countries of East Asia except Japan, (3) Portugal and Spain in Europe, (4) all countries in Latin America except Cuba, and (5) all countries in the Near East and South Asia.

As far as possible, production data for the Saar have been included in the data for West Germany for all years, unless otherwise indicated. Data for Alaska and Hawaii, when available, have been included in the total for the United States. Data for any of the above country groupings may or may not include all of the countries listed above, depending on the commodity or services listed.

Total.....	15.7	19.3	20.6	21.8	22.6	23.6	24.5

^a These data are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, military and nuclear research and development activities, and all space programs but exclude military assistance programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. These estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available during 1970 permitted.

^b Excluding military personnel related costs and therefore differing slightly from the RDTE&S data shown in the preceding table.

^a These data are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, military and nuclear research and development activities, and all space programs but exclude military assistance programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. These estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available during 1970 permitted.

^b Excluding military personnel related costs and therefore differing slightly from the RDTE&S data shown in the preceding table.

* An asterisk indicates that the data are unclassified.

^a For the individual European NATO countries, the ratios for converting gross national product (GNP) in national currencies at 1969 prices into 1969 US dollars on the basis of US purchasing power equivalents are derived from the 1950 ratios in Milton Gilbert and Associates, *Comparative National Products and Price Levels*, OEEC, Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1969 by applying the following factor: the derived price indexes for each European country for 1950-69 divided by a derived price index for the United States for 1950-69. These price indexes were derived for each country by dividing the growth of GNP in current prices by the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1969 prices. The total GNP for the European NATO countries is based on the estimate that the total GNP of the individual countries shown represents 95% of the total European NATO GNP, which is the approximate relationship derived from other sources. The values shown for the Communist countries have been calculated in a manner which makes them reasonably comparable with the values shown for the NATO countries.

^b The base year is the year prior to the stated period. Rates of growth are derived from unrounded data.

^c Converted at the exchange rate of 1.081 Canadian dollars to US \$1.

^d Including data for West Berlin, for which separate data are not available.

Other.....	58.0*	41.6	72
GNP.....	931.4*	473.2 ^b	51

^a An asterisk indicates that the data are unclassified.

^b US market prices. Total Soviet gross national product (GNP) and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US weighted and Soviet weighted ratios was then used for the conversion of Soviet values into dollars.

The magnitudes for the Soviet end use components were calculated to measure quantity of output compared with the United States but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs. Agriculture alone, for example, uses 31% of the labor force, or 38 million people, as a result of the inefficiency of that sector in the USSR.

The adjusted end uses of GNP are defined as follows:

(1) Consumption comprises personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education. (The personal consumption expenditures for the United States are \$577.5 billion.)

(2) Investment is defined (a) for both the United States and the USSR as the sum of expenditures for gross private domestic investment net of inventories; for public construction other than that for defense facilities; for equipment purchased by the government except that for defense; and for defense stockpiling and defense-production expansion; and (b) for the United States, as also including expenditures by state and local government for development of atomic energy. (The gross private domestic investment for the United States is \$139.8 billion.)

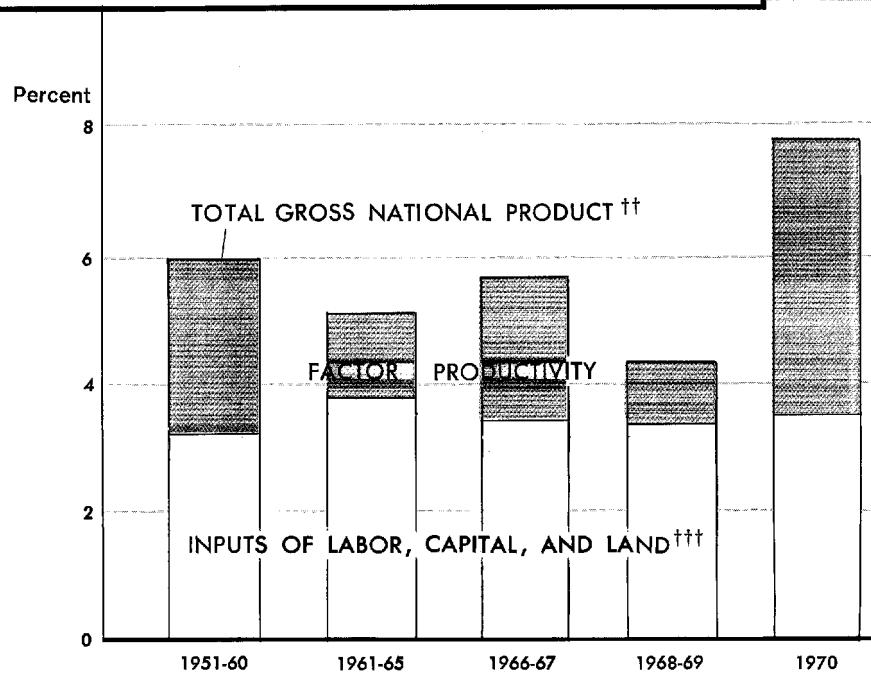

(3) Defense as a component of GNP comprises government purchases of goods and services for the military services, federal government expenditures on atomic energy development, and outlays on space research and technology. Defense excludes stockpiling activities and net military grants for foreign military assistance. (The federal government purchases of goods and services for national defense, excluding purchases by NASA, for the United States are \$78.8 billion.)

(4) Other for the USSR includes inventory change, administration, net exports, and a statistical discrepancy. Administration includes expenditures on civilian internal security, general agricultural programs, public organizations, government administration, and social welfare. Other for the United States includes administration, net exports and military assistance, change in inventories and stockpiles, and a statistical discrepancy. Administration is the residual left after all current expenditures for national defense, health, education, and all capital expenditures are subtracted from government purchases of goods and services. (There is no equivalent category for the unadjusted data for the United States.)

^b The sum of the end use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values. Nevertheless, the individual end use components were not adjusted to agree with the total, since the US-USSR comparisons shown are believed to give the best available description of relative size.

^a Because of the well-known difficulties in using Soviet established prices as a measure of resource burden, the shares of gross national product (GNP) in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1968 end use weights have been revised from an established price basis to a factor cost basis by subtracting turnover taxes and profits and adding amortization charges, implicit interest costs, agricultural land rent, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant market prices.

^b Preliminary.

^c Civilian research and development and expenditures on capital repair.

* An asterisk indicates that the data are unclassified.

^a Indexes for the NATO countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. Data for Belgium, France, Italy, Luxembourg, the Netherlands, the United Kingdom, and West Germany exclude the manufacture of food, beverages, and tobacco. The indexes for the Communist countries are estimates of this Office—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for the Communist countries include manufacturing, mining, and public utilities.

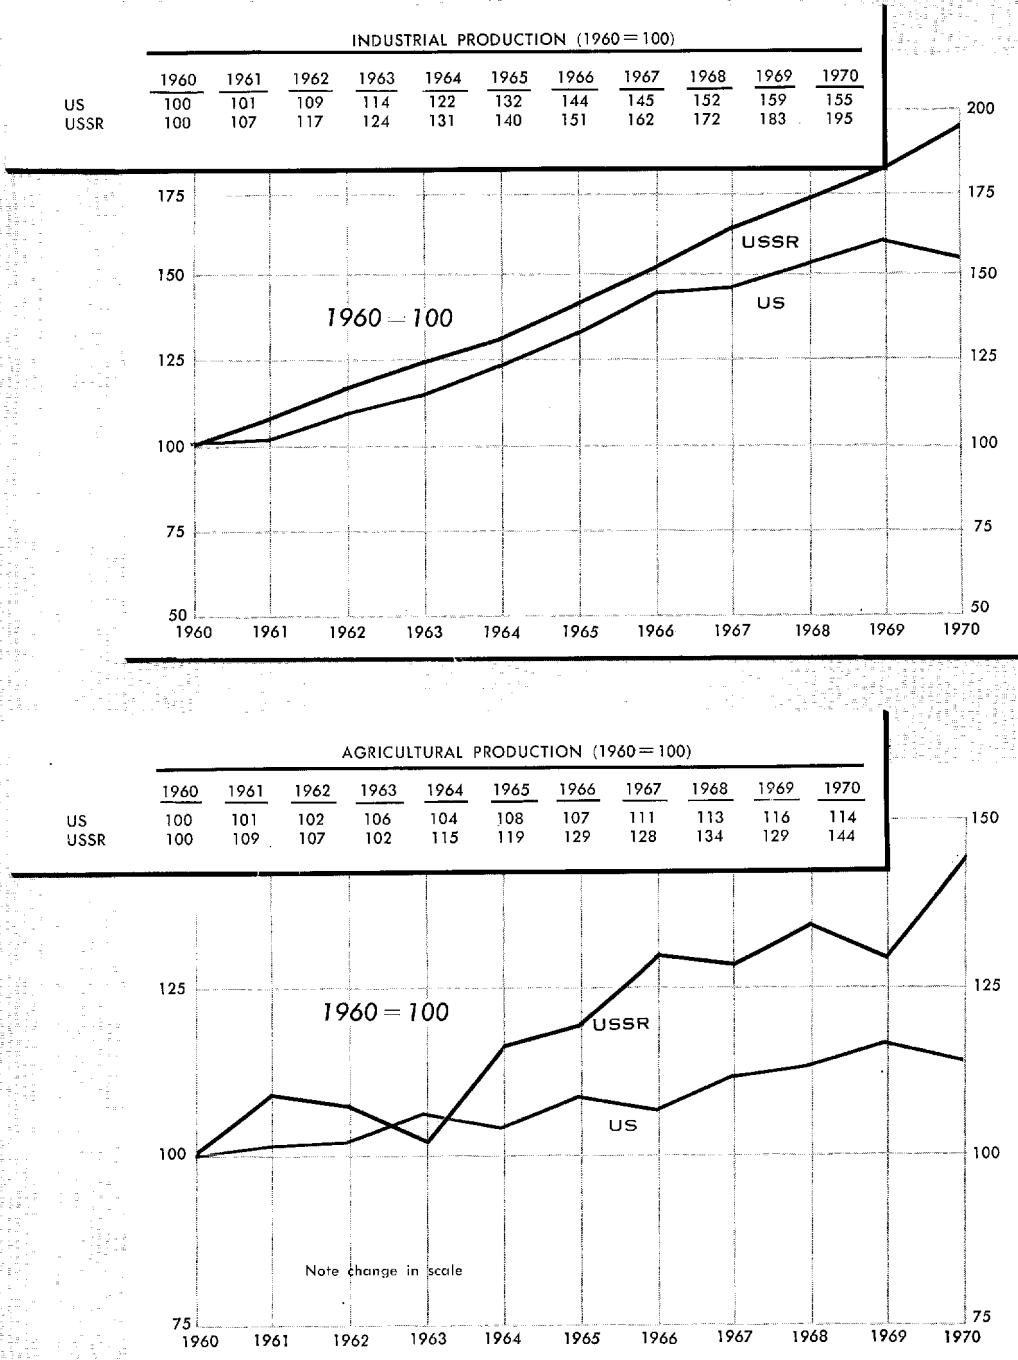

^b The base year is the year prior to the stated period.

^c Preliminary.

^d Index of gross values for individual commodities and branches aggregated by 1968 value-added weights. The three sectors covered—materials, machinery, and nondurable consumer goods—constitute 50.14%, 30.11%, and 19.75%, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of US industrial production of the US Federal Reserve Board.

^e Estimates of this Office computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production.

^f Based on the midpoint of the range.

Manhours	6.9	3.7	4.0	3.1	5.1
Capital	-1.7	-3.8	-1.0	-2.0	-2.6
INPUTS					
Labor (manhours) and capital ‡‡	6.2	6.4	5.6	5.2	4.7
Manhours	2.6	3.2	3.4	3.0	1.4
Capital	11.5	11.2	8.7	8.3	9.4

† The base year is the year prior to the stated period.

‡‡ Inputs of manhours and capital are combined using weights of 58.4% and 41.6%, respectively, in a Cobb-Douglas (linear homogeneous) production function. These weights represent the distribution of labor costs (wages and social insurance deductions) and capital costs (charges on fixed and working capital and depreciation) in 1968, the base year for all indexes underlying the growth rate calculations.

	AVERAGE ANNUAL RATE OF GROWTH (PERCENT) §			
	1951-60	1961-65	1966-67	1968-69
AGRICULTURAL PRODUCTION §§	4.4	3.2	3.8	2.1
FACTOR PRODUCTIVITY				
INPUTS §§§	2.1	1.1	2.2	1.5
	2.3	2.2	1.6	0.6

§ The base year is the year prior to the stated period.

§§ Percentages were derived from output data, using three-year moving averages.

§§§ Inputs of mandays, fixed capital, land, livestock, and current purchases are combined using weights of 57.3%, 8.4%, 17.3%, 2.9%, and 14.1%, respectively, in a Cobb-Douglas production function. These weights represent the monetary or inputted costs attributed to each of the inputs in 1959, the base year for all indexes underlying the growth rate calculations.

* An asterisk indicates that the data are unclassified.

^a These indexes are estimates of this Office. They are based on the value of crop production less feed (including imported grain), seed, and waste; plus the value of livestock products, including changes in livestock numbers. FAO/OECD West European regional price weights (1952-56 average) were used to compute the indexes.

^b The base year is the year prior to the stated period.

^a These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities, as in most Western definitions of industry, but also certain other activities (varying from country to country).

^b The base year is the year prior to the stated period.

^c Socialized industry only.

^d Estimated.

Services.....	5,692	8,164	9,160	10,523	11,051	11,034	11,100

^a Unless otherwise indicated, data are from the Soviet statistical handbook *Narodnoye khozyaystvo SSSR* for 1969.

^b Data are expressed in investment prices of 1 July 1955 adjusted to reflect subsequent introduction of the following changes: new unit valuations (1956), reduction of overhead cost norms (1958), reduction of equipment installation prices (1959), and reduction of prices for project-survey work and of unit valuations for some types of construction-installation work (1962).

^c Preliminary; estimated to the nearest hundred million rubles. The data were first estimated in prices of 1 January 1969 (the reporting prices for investment now in official use) and were then converted to prices of 1 July 1955 using estimated conversion ratios.

^d Rounded to the nearest hundred million rubles. Values for 1960 were computed from percentage share distributions as reported in the Soviet statistical handbook, *Statisticheskiy yezhegodnik stran-chlenov Soveta Ekonomicheskoy Vzaimopomoshchi*, 1970, p. 171.

^e Excluding the construction industry. Investment figures for 1960 and 1965-67 are from *Narodnoye khozyaystvo SSSR* for 1967, p. 622. The figures for 1968-69 are derived from investment series published in *Statisticheskiy yezhegodnik stran-chlenov Soveta Ekonomicheskoy Vzaimopomoshchi*, 1970, pp. 155-164.

^f Computed as a residual; it includes investment in nonferrous metallurgy, timber, paper, woodworking, and miscellaneous other branches of industry.

1969.....	525	248	59	218	1,164	
1970.....	730	291	69	370	1,603	

* Estimates of drawings are based on data derived from contracts indicating delivery and credit terms and on Soviet imports of machinery and equipment. In general, early contracts (1959-64) involved 80%-85% credit and 5% interest. A large number of contracts since 1965 have involved 85% credit and 6% interest. Repayment periods for the earlier credits were usually three to five years following downpayment. Typical terms since 1965 have been eight years following delivery of equipment.

United States ^l	279	292	305	309
USSR.....	10 ^j	29 ^j	58	71

^a The data do not necessarily represent food available for consumption, because imports of foreign grain and exports of domestically produced grain are not included.

^b Excluding corn silage and forage but including sorghum for grain.

^c Including miscellaneous grains and pulses.

^d Data are on a carcass weight, bone-in basis.

^e Excluding slaughter fats, poultry, rabbit, and variety meats.

^f Including slaughter fats, poultry, and edible offal.

^g Data are for factory sales and include complete units exported for assembly.

^h As of the end of the registration year.

ⁱ Based on data for production, imports, exports, and estimated retirements.

^j As of the end of the year.

^k Unless otherwise indicated, data are as of the beginning of the year.

^l Data are understated because they are based on the number of households with one or more units; thus, a household with more than one is counted as having only one.

^a The base year is the year prior to the stated period.

^b The official Soviet measure is based on a Marxist concept of national income and differs significantly from the concept used in Western market economies. For example, the Soviet measure excludes the value of services and overstates the contribution of industry by including all indirect taxes.

^c Official "gross" value series.

^d Raw gross output.

^e Including production of natural gas liquids.

^f Including production of gas from coal and shale.

ALL DATA IN THIS TABLE ARE UNCLASSIFIED

^a United States Arms Control and Disarmament Agency, *World Military Expenditures, 1970*, December 1970, pp. 18-24, and based on the ratio of military expenditures to GNP at current market prices. Military expenditures are current and capital expenditures to meet the needs of the armed forces including: expenditures of national defense agencies for military programs; expenditures for the military components of such mixed activities as atomic energy, space, and research and development; military assistance to foreign countries; and expenditures on paramilitary forces where they contribute substantially to a country's military capabilities.

^b Including data for West Berlin, for which separate data are not available.

ALL DATA IN THIS TABLE ARE UNCLASSIFIED

Table 16

Distribution of Defense and Space Expenditures,^a by Major Mission, in the US and the USSR
1970

	US ^b (Fiscal Year)		USSR ^c (Calendar Year)	
	Billion 1968 US \$	Billion 1968 US \$	Billion 1968 Rubles

Other.....	29.5	18.6	5.1	
Total.....	72.7	66.9	24.5	

^a To achieve as high a degree of comparability as possible, adjustments have been made to the basic data available for both the United States and the USSR. For example, the ruble data, by mission, shown here differ somewhat from the comparable data shown in the following table. All expenditures for research, development, test, and evaluation (RDTE&E) activities associated with military programs as well as expenditures for both civilian and military space programs have been aggregated and are included under RDTE&S (RDTE and space programs). All expenditures for nuclear warheads have been aggregated and are included under "Other." All expenditures for military assistance and civil defense programs have been excluded.

^b Planned total obligational authority (TOA). It should be noted that the pattern of expenditures shown for the United States is not representative of the pre-Vietnam period.

^c These data for the USSR are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The dollar valuations of Soviet expenditures are measures of Soviet programs computed on the basis of US factor costs and do not measure program costs as seen by Soviet planners.

^d Expenditures for research, development, test, and evaluation for all military programs and nuclear energy programs as well as all expenditures for military and civilian space programs.

Military machinery.....	8.6	11.8	12.8	13.7	14.3	15.1	15.9

^a These data are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, military and nuclear research and development activities, and all space programs but exclude military assistance programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. These estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available during 1970 permitted.

^b Including expenditures for tactical aviation.

^c Including expenditures for naval aviation.

^d Expenditures for research, development, test, and evaluation for all military and nuclear energy programs as well as all expenditures for military and civilian space programs. These data include personnel costs for military personnel associated with RDTE&S programs. The estimates in this table are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.

^e Expenditures for reserve training, militarized security forces, retirement pay, and paramilitary training, in addition to command and support for the active military establishment.

^a Excluding the armed forces.^b Annual averages of monthly data. Data are for civilian employment and differ from those presented in Figure 21. Data in Figure 21 are for farm employment and include farm operators doing one or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages. Data in Figure 21 are based on a survey of farm payrolls conducted by the US Department of Agriculture. Data for the agricultural labor force are based on a household survey of the entire population conducted by the US Bureau of the Census. Data in Figure 21 are a more comprehensive count of agricultural employment and are considered to be more comparable to data presented for the USSR, whereas data in this table are considered to be more comparable to data presented for the Communist countries as a whole.^c Excluding militarized security forces.

* An asterisk indicates that the data are unclassified.

^a Converted at US purchasing power equivalents.

^b Including the armed forces and the unemployed.

^c Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

^d Including an estimate for steel for castings for all years.

^e Data are for barley, corn, oats, rice, rye, wheat, and miscellaneous grains.

^f Data are on a carcass weight, bone-in basis, and are for beef, veal, pork, and mutton.

SECKE

**US AND SOVIET ECONOMIC AID EXTENDED
TO LESS DEVELOPED COUNTRIES OF THE FREE WORLD**

[†] Except for Southern Yemen, these data include only those fees demanded by countries to which both US and Soviet aid were extended prior to July 1970. US aid was extended to all countries to which US aid was extended). US data are for 1 July 1970.

Including economic and technical assistance and defense support obligations under the Foreign Assistance Act and inter-American integration, authorized Inter-American Development Bank loans, PR-480 numbered banknotes for shipments of surplus agricultural products, international joint participation in Bank loans, and US contributions to international organizations.

Data are for extensions, not actual drawings, and include credits and grants.

[‡] A minus sign indicates deobligations in excess of new obligations.

[†] Except for Southern Yemen, these data include only those fees demanded by countries to which both US and Soviet aid were extended prior to July 1970. US aid was extended to all countries to which US aid was extended). US data are for 1 July 1970.

Including economic and technical assistance and defense support obligations under the Foreign Assistance Act and intercedent legislation, authorized Inter-American Development Bank loans, PR-480 numbered banknotes for shipments of surplus agricultural products, annual international contributions, Bank loans, and US contributions to international organizations.

Data are for extensions, not actual drawings, and include credits and grants.

[‡] A minus sign indicates deobligations in excess of new obligations.

^a Estimated value of military deliveries. Except for Yugoslavia, information on extensions is not available.^b Information for individual years is not available.^c Believed to be largely or entirely grant aid.^d May also include military deliveries on current account, rather than credit.^e During 1962-70, Soviet military deliveries to Cuba totaled 308.5 thousand metric tons. Annual deliveries in thousand metric tons are as follows: mid-July to mid-October 1962, 150.0; 1963, 38.7; 1964, 17.5; 1965, 10.8; 1966, 21.4; 1967, 41.1; 1968, 6.2; 1969, 11.5; and 1970, 11.3.^f It is estimated that agreements in 1961 and 1962 provided for military deliveries valued at \$140 million, and an agreement in late 1964 or early 1965 for another \$225 million.^g During the period under review, Soviet military deliveries to Eastern Europe are estimated at about \$9 billion. Of this amount, about \$2 billion represents local costs of Soviet troops in Eastern Europe, presumably assumed by the USSR. The remaining \$7 billion likely was exported to Eastern Europe on current account. Between 1955 and 1962, Soviet military deliveries to Communist China are estimated at \$1,285 million, but this figure may include Soviet exports on current account.

Argentina	1,383*	4,222*	6,060*	Kuwait	941*	1,794*	3,660* ^f	Venezuela	4,606*	6,538*	8,920*
Iran	950*	1,230*	11,232*	Mexico ^g	9,665*	13,965*	18,804*				

^a An asterisk indicates that the data are unclassified.^b Data include only gas from natural gas wells and associated gas from petroleum fields.^c Including only data for the United States and those countries listed under "Other NATO Countries." Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.^d Data for the United States are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste), which would include gas returned to reservoirs in order to maintain horizon pressure would be as follows (in billion cubic meters):

1960	1965	1966	1967	1968	1969
411	500	528	560	589	627

A much smaller share of total production in the USSR is believed to be used for repressuring.

^e Gross production.^f Production from gasfields only.^g Data are for the previous year.^g Including gas used for repressuring and gas wasted.

* An asterisk indicates that the data are unclassified.

^a Data are for total (gross) production at generating centers and therefore include transmission losses and station use. (See footnote b.)^b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5% the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.^c Data are for the year beginning 1 April of the stated year.

United States ^b	31.3*	44.0*	53.6*	54.6*	70.5* ^c	72.5* ^c	58.3* ^c	
USSR.....	29.9*	34.6*	38.4*	41.1*	42.1*	42.7*	41.0*	

* An asterisk indicates that the data are unclassified.

^a Power-driven metalforming machine tools that are not supported in the hands of an operator when in use and are designed to press, forge, emboss, hammer, extrude, blank, spin, shear, and bend metal into shape.

^b Unless otherwise indicated, data exclude manually operated bending and forming machines, spinning lathes, and riveting, canmaking, die-casting, wire-weaving, wiredrawing, knurling, and marking machines, which usually are included in the definition of metalforming machine tools by the US Department of Commerce.

^c Including manually operated bending and forming machines for which separate data are not available.

Table 123

	Production of Metallurgical Equipment ^a in Selected Communist Countries						Thousand Metric Tons
	1960	1965	1966	1967	1968	1969	1970

Romania.....	27.2	40.6	48.4	51.4	58.5	66.3	N.A.

^a Unless otherwise indicated, data are for rolling mill equipment; mechanical equipment for coke, blast, and smelting furnaces; mixers; crushers; grinding mills for ore and coal; agglomeration installations; and special hoist-transport mechanisms for metallurgical shops. Equipment for nonferrous shops is believed to be included but probably amounts to only a small percentage of the total physical volume. Data for the United States are not available in terms of metric tons.

^b Beginning in 1965, data include fewer components and spare parts.

^c Rolling mill equipment only.

Table 124

Poland ^d	186	471	647	830	1,100	1,158	1,135	
Romania ^e	98	27	44	95	85	72	N.A.	

^a Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electric power. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

^b Shipments of units of 4,000 kilowatts and larger. Data are available only for turbines produced as integral units together with generators. Therefore, data for turbines and generators for the United States are assumed to be the same. Some turbines are produced in single units but no data are available on this production.

^c Including a small number of gas turbines.

^d Steam turbines only.

^e Steam turbines of more than 500 kilowatts only.

^a An asterisk indicates that the data are unclassified.

^b Ships of 1,000 gross register tons (GRT) or more. Unless otherwise indicated, data are as of the end of the year. Data for the NATO countries include all combination passenger and cargo ships, whereas, unless otherwise indicated, those for Communist countries exclude passenger ships that have small cargo capacities.

^c Data are as of midyear.^c Excluding ships operating only on the Great Lakes and US-owned ships flying the Liberian, Panamanian, and other "flags of convenience."^d Excluding the Caspian Sea fleet and including refrigerator ships and tankers serving the fishing fleet.^e Before August 1968, a few additional Bulgarian-owned ships were operated under the flags of Free World countries.

^f Until March 1967, an undetermined number of Czechoslovak-flag ships were jointly owned with Communist China.

^g Including some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1970, there were 12 of these ships, totaling 105,284 GRT.

^h Including coastal passenger ships.

ⁱ Except for 1960, data include a number of ships jointly owned by the Albanian Joint Stock Shipping Company. At the end of 1970, there were four of these ships, totaling 30,811 GRT.

^j Data are as of midyear through 1967.

^k Excluding Greek-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

^a Official rates unless otherwise indicated. These rates are used for converting trade statistics.

^b Rates used for noncommercial transactions such as diplomatic, tourist and student expenditures, personal remittances, and the like. Some countries have special rates for tourists and personal remittances in addition to the noncommercial rate.

^c The unofficial rates actually used in East German accounting of foreign trade transactions. Official rates still listed, but not used, are 2.22 DME to US \$1 and 2.47 DME to 1 ruble.

^d Based on the cross rate of exchange between the yuan and the UK pound sterling.
